Everyone wants to know their status for piece of mind and to protect their loved ones. Otherwise your work place may require you to get it checked if you are positive for Corona Virus or not, indicating presence of antibodies to COVID-19. Knowing your status can help to flatten the curve and stand up to this virus.

## COVID -19 IgM/IgG Rapid Test Cassette

This test detects both early marker and late marker, IgM/IgG antibodies in human finger-prick samples same as checking blood Sugar. Positive IgM indicates early infection while Negative IgM and Postive IgG indicates presence of antibodies to COVID-19 Corona Virus. Positive cases have to be confirmed with Nasal swab test, sent to the lab. If there are no symptoms as fever cough or shortness of breath, most likely person has been exposed and now immune to Corona virus. Though there is limited knowledge, but is considered most likely such person may not get COVID-19 disease again at least from the same strain. The studies on this test have shown sensitivity of 96.4% and specificity of 98.7%, there can be false negative or false positive results.

We are proud to bring you one of the world's finest rapid point-of-care lateral flow chromatographic immunoassays for the qualitative (IgG and IgM) to Novel coronavirus in human Whole Blood/Serum/Plasma. The test has been used widely by the Chinese CDC to combat infections and is now available globally as well as USA.

In this ever growing pandemic, the in vitro diagnostic test can be used for rapid screening of carriers of the virus that are symptomatic or asymptomatic. Recent studies suggest that a high percentage of patients show no clinical symptoms of the virus, thus screening patients is vitally important.

COVID-19 is antibody screening Test is covered by Medicare and most private insurances in healthcare facilities. Non Insurance and non-covered insurance patients pay \$50 with office visit.
